

Problem: Paper Abstract Search/Tagging

Description: Data is a collection of 189 files having abstracts of publications, reviewer file with 25 topics and their relevance according to the reviewer. The project will create a search system to obtain papers are relevant to a user's query. Also, project will explore subject matter tagging to abstracts. This implementation may be improved version (in terms of performance) for subject based index. The validation of the result can be checked with the provided reviewer file.

Source: <http://sifaka.cs.uiuc.edu/ir/data/review.html>

Outcome: An improved Search Engine useful for paper tagging and subject indexing.
